Intro

About the lecturer[1]

- Aleksandr Petiushko, PhD in theoretical CS (2016)
- Lecturer in Lomonosov MSU / MIPT for Machine Learning, Computer Vision, Deep Learning Theory, Python for an ML Researcher since 2019
- Former Huawei Chief Scientist (Scientific Expert), AIRI Director of Key Research Programs (Leading Scientific Researcher), Nuro Head of ML Research, Gatik Head of AI Research, Logical Intelligence Head of AI

[1] Homepage: `https://petiushko.info/`

Intro

Time to introduce yourselves: what are your hobbies, motivation in ML, etc.: please go into "**Module 1 Students Introduction**" thread

Sofia Plagiarism Policy

- It covers parts "*sourced from AI*"
  - Please read the "**Sofia Plagiarism Policy**" thread
  - **First offense**: students need to rewrite assignment
  - **Second offense**: students fail the course
  - **Third offense**: students re to be withdrawn from their program

Note about xGPTx

- It can produce very plausible answers in 90% of cases

Note about xGPTx

- It can produce very plausible answers in 90% of cases
- The caveats are the following:

Note about xGPTx

- It can produce very plausible answers in 90% of cases
- The caveats are the following:
  - It can really hallucinate some things which are just untrue

Note about xGPTx

- It can produce very plausible answers in 90% of cases
- The caveats are the following:
  - It can really hallucinate some things which are just untrue
  - It can produce very different information in comparison to the source used to ask question (e.g., book chapter)

Note about xGPTx

- It can produce very plausible answers in 90% of cases
- The caveats are the following:
  - It can really hallucinate some things which are just untrue
  - It can produce very different information in comparison to the source used to ask question (e.g., book chapter)
- **Important**: if you use AI to complete a written homework assignment (for example, an essay, code, report), you should indicate this **at the beginning of your work**
  - For example: “This work was prepared using Claude Code”

Remarks/feedback

- As a rule, any feedback on your assignment (code, report, essay) is posted in the comments section for that assignment

Remarks/feedback

- As a rule, any feedback on your assignment (code, report, essay) is posted in the comments section for that assignment
  - Including midterms / final exam

Remarks/feedback

- As a rule, any feedback on your assignment (code, report, essay) is posted in the comments section for that assignment
  - Including midterms / final exam
  - Only mistakes / drawbacks are going to be highlighted

Course logistics

- Course grading will be done based on attendance, assignments, discussions, mini research problem, coding tasks, and the final exam.

Course logistics

- Course grading will be done based on attendance, assignments, discussions, mini research problem, coding tasks, and the final exam.
- Contribution:
  - 58%: attendance, assignments, discussions
  - 21%: MRP
  - 21%: final exam

Course logistics

- Course grading will be done based on attendance, assignments, discussions, mini research problem, coding tasks, and the final exam.
- Contribution:
  - 58%: attendance, assignments, discussions
  - 21%: MRP
  - 21%: final exam
- Preliminary grading scale:

Grade	Percent accumulated
A	$\geq$ 90 %
B	80-89 %
C	70-79 %

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github
- It should contain:
  - *tl;dr*: motivation, main idea, and results briefly (1 slide)

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github
- It should contain:
  - *tl;dr*: motivation, main idea, and results briefly (1 slide)
  - Literature review on the related methods

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github
- It should contain:
  - *tl;dr*: motivation, main idea, and results briefly (1 slide)
  - Literature review on the related methods
  - Approach used (with all relevant links used)

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github
- It should contain:
  - *tl;dr*: motivation, main idea, and results briefly (1 slide)
  - Literature review on the related methods
  - Approach used (with all relevant links used)
  - Link to the code used to achieve the goal

Note about optional MRP

- MRP = **M**ini **R**esearch **P**roblem
- Topics: all the directions learned through the lectures (but not limited to - just contact your instructor in advance)
- MRP to be done in form of a pdf presentation that should be shared via student's github
- It should contain:
  - *tl;dr*: motivation, main idea, and results briefly (1 slide)
  - Literature review on the related methods
  - Approach used (with all relevant links used)
  - Link to the code used to achieve the goal
- Presentations to be presented by the author during the last onground session
  - Duration: apprx 10 min

Late Submission Policy

Late submission deduction percent: **15% every day**;

Late Submission Policy

Late submission deduction percent: **15% every day**;

- It means that if you're **7 days late** you'll get **0 score** but **need to submit anyway**.

Makeup Policy

Missing onground class:

- Student's grade is dropped by 10%;

Makeup Policy

Missing onground class:

- Student's grade is dropped by 10%;

Missing Exam:

- A student gets 0 for the Exam;

Makeup Policy

Missing onground class:

- Student's grade is dropped by 10%;

Missing Exam:

- A student gets 0 for the Exam;

Missing Assignment in time (1 week, please refer to the *Late Submission Policy*):

- No makeups, i.e. 0 for the Assignment;

Makeup Policy

Missing onground class:

- Student's grade is dropped by 10%;

Missing Exam:

- A student gets 0 for the Exam;

Missing Assignment in time (1 week, please refer to the *Late Submission Policy*):

- No makeups, i.e. 0 for the Assignment;

Unless:

- A Student has a serious medical condition, and this condition is validated by a hospital or licensed California physician (in English)
- The Student contacts in time our chair (Samane Abdi) and Professor and describes the situation and provides all the needed proofs

The same procedure should be followed in terms of family emergencies (like bereavement, funeral) - please provide any proof and notify the chair and Professor.

Github

- Course page: `https://github.com/fatheral/ai-intro-course`
- The professor's lectures are uploaded there

Takeaway notes

1. Please go through all the materials of **Module 0**

Thank you!
